Detailed Project Description and Justification:

All streets in the Slaterville Subdivision north of Minnie Street - \$200,000. The various roads in this subdivision were surfaced with chip and seal approximately 8 to 12 years ago and the surfacing is at or beyond the useful life expectancy. All roads in the subdivision are experiencing extensive raveling, potholing, and base course/sub-base failure mostly exacerbated by a very poor to non-existent storm drainage system. During breakup of each year the subdivision requires extensive steam thawing by public works crews to minimize flooding. Proposed improvements in the subdivision would include grinding the existing surfaces, reconstructing the base course and increasing the centerline elevation of the road in most areas and re-profiling the road section to improve drainage, extending the storm drain system throughout most of the subdivision by installing lateral storm drain lines and new catch basins, and re-surfacing the roads with 2 inches of AC pavement. The storm drain system drains to Noyes Slough, an EPA-listed impaired water body, thus additional best management practices must be implemented to the system, such as deep barreled catch basins and sedimentation devices near outfalls.

Project Timeline:

Most work should be completed in Summer of 2008. If additional work is needed, this project may extend into 2009.

Entity Responsible for the Ongoing Operation and Maintenance of this Project:

City of Fairbanks
